

[ARCHIVED CATALOGUE]

Electrical Engineering (Electric Power) (MS)

Sustainable Infrastructure Systems

The Sustainable Infrastructure Systems program prepares students for immediate and effective participation in the modern infrastructure workforce through a common core that includes smart-system design for sustainable infrastructures, the societal and regulatory context of infrastructure engineering decisions, and construction management. Four plans of study for the Master of Science degree allow for specialization based on background and interest.

Master of Science in Electrical Engineering (Electric Power)

Required Courses

- [EE 443 Introduction to Power Systems](#) Units: 4
- [EE 444 Power Systems Technology](#) Units: 4
- [EE 521 Power Systems Analysis and Design](#) Units: 4

Elective Courses (At least four courses, take at least one from each area)

A course may not count for more than one area.

Transmission, Distribution and Planning

- [CE 501 Architecture, Engineering and Construction Practices](#) Units: 4
- [EE 516 High-Voltage DC Transmission Systems](#) Units: 4
- [EE 525 Power System Protection](#) Units: 4
- [EE 526 Renewable Energy in Power Systems](#) Units: 4
- [SAE 515 Sustainable Infrastructure Systems](#) Units: 4

High-Voltage Equipment and Design

- [EE 516 High-Voltage DC Transmission Systems](#) Units: 4
- [EE 528 Power Electronics](#) Units: 4

Power-System Control and the Smart Grid

- [EE 482 Linear Control Systems](#) Units: 4
- [EE 527 Net-Centric Power-System Control](#) Units: 4
- [EE 543 Digital Control Systems](#) Units: 4
- [EE 585 Linear System Theory](#) Units: 4
- [EE 593 Robust Multivariable Control](#) Units: 4

Additional Requirements

Students with MS degrees in engineering or science disciplines can be accepted in these programs. Students must satisfy all other departmental degree requirements.

Total Minimum Units: 28
